Patrick:

I am sure you are familiar with the attached fact sheet since you were a co-author with Steve. Please take a look at this and provide any revisions that may be needed to bring it up to date. According to Steve, there were really no substantive updates in 2019 other than making it a RCP Annex. Also, Steve suggested having the PCC reps do a couple of paragraphs on what they thought were success stories on how the PCC provided assistance during a response or exercise; ie. McDona train derailment near San Antonio, border exercise, Gold King, ITC/TPH, or any others they want to talk about. I know that this will add length to the document, but Steve felt it would improve the product. Thoughts?

I am on leave next week, so maybe we can talk after the Holiday. Have a good weekend.

Warren

Subject: RRT Fact Sheet -- Poison Control Center

# ACTIVATION GUIDANCE FOR POISON CENTERS

## RRT6 FACT SHEET # 104

October, 2011; Revised July, 2019

### Introduction

Poison Centers (PC), often called “poison control centers”, have historically been unrecognized in the preparedness and response community as a major player in the role of protecting the health of our population during hazardous materials incidents or terrorist events. Functioning on a very limited patchwork of local, state and federal funding, Poison Centers have provided vital health services to the general public and health care professionals for over 30 plus years. The PC provision of **direct 24-hour patient care services** to residential callers, health care professionals and institutions adds value to the services provided by many government public health entities, health care providers and commercial insurance carriers. Not only can the PCs provide medical evaluation and consultation, they also save the states substantial money by reducing the number of hospital ER visits because they can assess and often treat cases at home, saving the States hundreds of thousands of dollars each year.

The Region 6 Regional Response Team (RRT6), Co-Chaired by the US Environmental Protection Agency (EPA) and the US Coast Guard is the federal component of the National Response System for the states of Arkansas, Louisiana, New Mexico, Oklahoma, and Texas. RRT6 is composed of representatives from sixteen (16) federal departments and agencies and each of the five States. In addition, Region 6 shares its southern border with the country of Mexico. Similar to the RRT, a Joint Response Team (JRT) is established along the US/Mexico border consisting of federal, state and local agencies involved in chemical emergency prevention, preparedness and response on both land and water.

RRT6 has recognized the potential value and contributions that PCs offer to the National Response System and drafted this interim guidance document for use of PCs within its jurisdiction, and for consideration as a national guidance document by the National Response Team (NRT).

### **What are Poison Centers?**

In the United States, PC(s) provide immediate treatment advice for poison emergencies. PC centers are staffed with nurses, physicians, pharmacists and other highly trained healthcare professionals who offer expertise in many areas. Areas include: chemical, environmental, radiological, biological, oil spills, and agricultural hazardous materials. This information is available to all public health entities, environmental agencies, hospitals, on-scene responders, and the general public. Poison Centers are also equipped with skilled linguist that can overcome multiple language barriers. Region 6 Poison Centers handle Spanish speaking callers regularly to reflect the communication and collaboration efforts between Mexico in order to include bi-national partnership.

### **Which Poison Center can be used?**

There are ten (10) PCs in Region 6; one (1) each in New Mexico, Oklahoma, Arkansas and Louisiana and a network of six (6) inter-connected centers in Texas.

The PCs in Region 6 can be contacted to assist the RRT and its member stakeholders address public health issues within their respective states or even in the event of a national disaster.

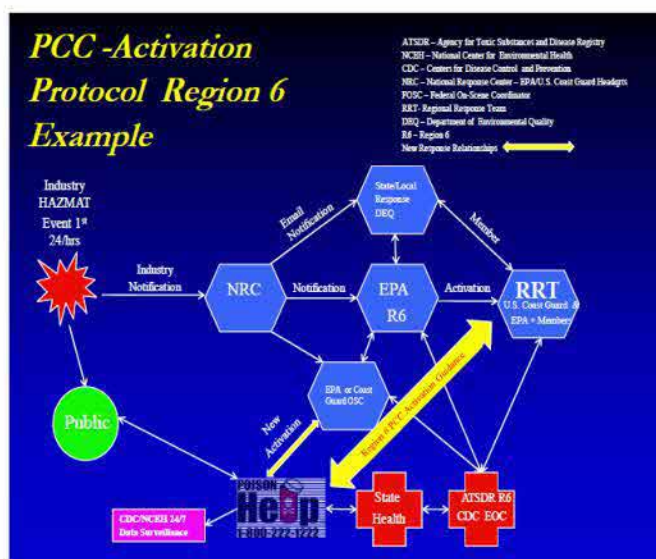

### **When can Poison Center be used?**

Poison Centers are available to receive calls 24 hours a day, 7 days a week; thus, PCs are available to receive telephone calls during all phases of a disaster. Poison Centers are accessible to anyone calling from within their state. Poison Centers can receive calls from the public, 911 operator/dispatcher, impacted citizens, the media, receiving hospitals, private industry, physicians, state/county health departments', state/county environmental agencies, federal environmental and health agencies, and emergency managers from local, state and federal agencies.

**To contact a Poison Center just call the toll-free national number:**

**1-800-222-1222 from a landline phone system within the State in which the disaster has occurred.**

Or contact the PC directly through the non-emergency office phone number listed at the end of this document. **Note:** Cell phones can be used. However, the cellphone area code might route a caller to a Poison Center based on the area code the cell phone device is registered. Regardless, calls can be re-routed back to the state in which the event has occurred.

## How can a Poison Center assist the RRT and JRT?

Poison Centers have legally designated authority to address and provide treatment recommendations to the people exposed to all types of poisons. PC's also are available to serve as a means of communicating to callers during disaster events. This allows a broader communication approach to addressing the general public. Both the RRT and JRT, and their member agencies, can utilize the expertise of the PC(s) to address human exposures due to any and all hazardous materials emergency events. In addition, the poison centers have the ability to track calls, that can be used to provide invaluable epidemiological data that isn't communicated to hospital systems.

## What types of incidents would involve a Poison Center?

PCs are available to assist local, state, and federal agencies by providing a public telephone-based service for any type of incident where hazardous materials may threaten the public health. Incidents might include:

- Localized impacts that are managed by EMS, police, and fire fighters
- Larger events involving State emergency response programs
- Disasters requiring Federal assistance
- Spills of National Significance requiring support from multiple PCs

## Hazards addressed include:

- A toxic industrial chemical release from a chemical facility fire
  - Household hazardous waste (pesticides, mercury thermometers, etc.)
- Oily residues from natural disasters
- Major oil spills
- Chemical/Biological/Radiological/Nuclear (CBRN) event

## How can PC's function within the Incident Command System?

The ICS establishes positions that accomplish key functions of incident management, including command, operations, planning, logistics, and finance. Poison Centers may interact with these positions over the course of an

incident. The initial decision to activate a PC would be made by the Incident Commander, however the activation can be publicly announced through a PIO or Liaison Officer. Following the activation of a PC, information gathered pertaining to the potential hazards of the incident would be provided by the Planning Section. In turn, the PC would be able to offer advice on safety and treatment of potential exposures to the Safety Officer and Operations Section. If the event generates news media or political interest, it may be necessary to involve a Joint Information Center (JIC) in developing public statements for PC to use during calls received from the public. This may be elevated to the National Information Center (NIC) during events of National Significance.

## What information would a Poison Center need from emergency response agencies?

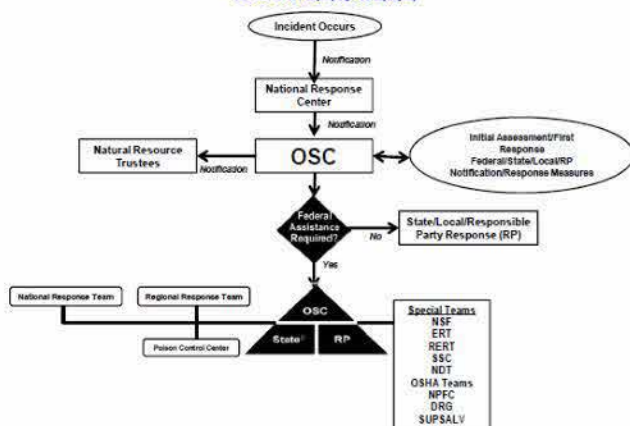

What information would a Poison Center need from emergency response agencies? In order to make informative decisions, the agency(s) that activate the PC should provide any data that can assist in responding to public inquiries. Information that might become available through ICS liaisons may include:

- Spill reports
- Exact location of spill/releases
- Amount of material spilled and type
- Health and environmental impacts
- Plume maps, site photos, fact sheets, and weather conditions
- Sensitive issues
- Contamination maps/zones

## What information can PC's provide to incident command staff during and after an incident?

In addition to providing toxicology advice, PC's generate data routinely that is very beneficial to incident command staff. In response to calls from the public, they record information that aids incident management staff in the development of effective response and mitigation strategies. The information recorded includes: identification, phone numbers, location of potential exposures, symptoms observed/reported, and the progress of individuals they refer for medical treatment.

### Poison Control Center Notification Process 1-800-222-1222

## **How might Poison Centers be used to support a disaster of National Significance or a Spill of National Significance (SON)?**

There are 57 poison centers in the U.S. serving all residents. If one center is overwhelmed with a large call volume, PC's have the ability to transfer a portion of their calls to another or multiple poison centers. All PC's have disaster routing plans in place, poison centers are encouraged to have at least two alternate centers designated to help manage excessive call volumes. In the event of major spill or event that causes the activity to be designated a Spill of National Significance, a single PC should take the lead role and be the Point of Contact (POC) during the event. Other PC(s) should support the lead PC by providing call data on a daily basis. The Lead PC will have the responsibility of coordinating with the American Association of Poison Control Center (AAPCC) and the National Poison Data System (NPDS) to establish a "event code" for tracking establish email communication links with State and Federal Response partners to include other Poison Centers; and, creating a daily Situation Reports (SIT Reps) for surveillance monitoring. If the criteria for a certain syndrome is met, an anomaly alert is generated. A national surveillance team analyzes the case or cases that triggered the alert. More information may be required where the cases originated.

If public health is found the appropriate health authorities are immediately notified.

## **Emergency Management Assistance Compacts (EMAC)**

- All states in FEMA Region 6 have legislatively enacted the EMAC agreement
- EMAC's provide form and structure for interstate mutual aid
- EMAC's quickly/efficiently resolve two key issues upfront: liability and reimbursement
- Only authorized representatives (Governor or designee) may request assistance from another state

## **Reimbursement**

- In accordance with the EMAC's, states rendering aid shall be reimbursed for all costs by the state receiving aid
- In presidential declared disasters, FEMA reimburses impacted states on a cost reimbursable basis
  - Pursuant to the Stafford Act, division of costs among Federal, State, and local governments is a negotiable item
  - The minimum federal share under the Stafford Act is 75%
  - However, depending on all the circumstances, the Federal government may assume a larger percentage of the costs

#### PCC Contacts by State (Non-emergencies):

- Oklahoma PCC: 405-271-5062
- Arkansas PCC: 501-686-5532
- New Mexico PCC: 505-272-4261
- Louisiana PCC: 318-813-3317
- North Texas PCC (Dallas):  
214-590-901
- South Texas PCC (San Antonio):  
214-590-9010

#### Emergency Response Numbers

Arkansas Dept. of Emergency Management	800-322-4012	Oklahoma Department of Environmental Quality	800-522-0206
Louisiana State Police	877-925-6595	Texas Environmental Hotline	800-832-8224
New Mexico State Police	505-827-9126	National Response Center	800-424-8802

This document does not substitute for specific agency regulations, nor is it a regulation itself. It cannot impose legally binding requirements on federal departments/agencies, states, or the regulated community, and may not apply to a particular situation based upon circumstances. This guidance does not represent any final department/agency action, and may change in the future, as appropriate.

Mr Nickle,

I'd like to rescind my formal request for a health consult, but would definitely like to discuss the options and what the health consult entails. In the event your doing a consult with the county, a consult for us may be redundant. I appreciate your work and time.

Thanks

Adam

Patrick:

Have you had a chance to look at this Fact Sheet? Please advise. My bosses are busting my chops to get this finalized by the end of the month.

Thanks

Patrick:

I am sure you are familiar with the attached fact sheet since you were a co-author with Steve. Please take a look at this and provide any revisions that may be needed to bring it up to date. According to Steve, there were really no substantive updates in 2019 other than making it a RCP Annex. Also, Steve

suggested having the PCC reps do a couple of paragraphs on what they thought were success stories on how the PCC provided assistance during a response or exercise; ie. McDona train derailment near San Antonio, border exercise, Gold King, ITC/TPH, or any others they want to talk about. I know that this will add length to the document, but Steve felt it would improve the product. Thoughts?

I am on leave next week, so maybe we can talk after the Holiday. Have a good weekend.

Warren

EPA staff turned it over to the Emergency Response Sections Chiefs and Branch managers. When they review/comment, EPA will send it to Coast Guard for review/comments. After that, should be good to go. A couple of weeks?

Patrick,

Nice document.

You should plan to can give a short presentation and hand it out to your regional rep colleagues at the next monthly regional call.

I will try to see if the new ATSDR EM management is interested.

Jack

**Subject:** ITC Health Consult - Final?

Good afternoon Patrick,

Hope all is well with you and yours.

In going back through emails, was there ever a final report/letter of findings for the ITC Health Consultation?

If so, would you please share it with me for the file and final report, please?

Thanks again for your work.

Adam
